

Maybury can supply you with Southworth products that provide practical, ergonomic solutions for efficient lifting and positioning, resulting in improved worker productivity and safety.

Product Lifts and Container Tilters

Backsaver Lift

Lift capacities are 2,000, 4,000 and 6,000 lbs., and standard lifting heights are up to 72". You can choose footswitch, push-button control and several electrical power configurations. Conveyor tops, turntables and a wide range of other options are also available. Compact versions of our standard Backsaver Lifts are available in capacities of 500 and 1,000 lbs. The double-scissor mechanism allows up to 36" lifting height with a footprint as small as 12" x 24".

Turntable Lifts

Gone is the bulky structure of the added turntable with its necessary increase in the lowered height of the lift. The built-in turntable is set in flush to the table top in a clean, uncluttered design with no significant increase in lowered height. The turntable is rotationally locked when the lift is in the full down position.

Portable E-Z Reach Container Tilters

Portable E-Z Reach Container Tilters are specifically designed to improve worker productivity and safety by positioning wire baskets and other large containers so that parts are easily accessible without the need for bending, reaching or stretching. Casters are provided so that units can be moved easily throughout the plant. Models are available for load capacities up to 4,000 lbs.

Pallet Handling Equipment

PalletPal Level Loader – Fully Automatic, Spring Actuated

PalletPal Level Loaders virtually eliminate lifting, bending and stretching – the primary causes of back injury. This simple, automatic unit incorporates a turntable to allow nearside loading and a system of springs and shock absorbers which lower and raise the unit, as pallets are built up and broken down, to maintain a constant working height. No power or air supply is required. Pallet loads to 4,500 lbs. can be handled.

PalletPal Stretch Wrappers

Handwrapping is dangerous. The PalletPal Stretch Wrapper is an inexpensive alternative that incorporates a low-profile powered disc turntable and a stationary mast assembly. Simply wheel a loaded pallet onto the disc and move the stretch wrapping wand up and down the mast as the powered turntable spins the load.

PalletPal Disc Turntables

A low-profile design, less than 1" high, allows PalletPal Disc Turntables to accept a hand pallet jack. By rotating the load, the operator always works from the near side without walking around the pallet. The risk of injury from reaching or stretching is virtually eliminated. The turntable is totally portable and can be easily moved throughout the plant.

Maybury can supply you with Southworth products that provide practical, ergonomic solutions for efficient lifting and positioning, resulting in improved worker productivity and safety.

Stackers

Southworth stackers are much easier to integrate into your operation because, unlike fork lifts that require trained, certified operators, anyone can use them. Their versatility makes them ideal for feeding pallet rack and any other pallet storage or transfer operations throughout the plant or warehouse. And because they are a Southworth product, your investment is secure and guaranteed.

Southworth manual stackers feature a rugged, ergonomic design. They are extremely simple to use, highly maneuverable and available in capacities up to 3,000 lbs., with lifting heights up to 80". Lift is achieved by simply pressing a push button that is integrated into the comfort grip handle. A convenient battery indicator gives charge status at a glance. The integral battery charger makes recharging a breeze.

Dock Lifts

You can save the high cost of dock construction, work from any truck bed level to grade level and handle unstable loads quickly and safely with Dock Saver Lifts. These lifts can be installed indoors or outdoors and will handle all loads up to 20,000 lbs. These heavy-duty lifts are ideal for cargo handling and lifting heavy industrial loads. Built-in hydraulic overload relief protects personnel and structures. Heavy-plate platforms with structural reinforcements minimize deflection while the wide base provides increased rigidity and stability.

For applications where the height of the truck bed must be adjusted, Southworth also offers a line of extra-heavy-duty truck levelers in capacities from 5,000 to 20,000 lbs. to meet even the most massive load requirements.

Lift-Tool™

Lift-Tool is the go-anywhere, do-anything tool that no workbench, service van or maintenance cart should be without. A Lift-Tool is like having a personal assistant with you at all times. Whenever you need an extra pair of hands to hold or position something for you, the Lift-Tool is the answer.

- Lightweight, yet rugged – handles up to 300 lbs.
- It's powered by your cordless drill; you won't get all tangled up in electrical cords or air hoses

Coil & Roll Handling

Southworth manufactures a wide variety of equipment for lifting, positioning and transporting large, heavy rolls and coils. From Coil Cars to Roll-Upenders to Tilt Down Tables, Southworth has a product for every roll handling or coil handling application.
