

Maybury offers open and closed racking units in a wide variety of sizes and capacities. We have the flexibility to provide top-quality storage for both simple and sophisticated storage systems.

Wire Containers

- Can be handled by hand or fork lift trucks
- Can be used in warehousing, shipping, bulk merchandising and display applications
- Units stack well and are built for long service
- Allow for cleaner transportation and storage of product

Barrier Blockades

Barrier blockades provide a means of restricting access to selected rooms, aisles, or other areas where temporary accessibility is an issue.

Dock Door Blockades

- Visual safety barrier
- Allows for air flow
- Debris containment barrier
- Tested to 1,500 pounds

Aisle Blockades

- Quick and easy to install
- Decrease liability and limit access
- Adjustable and versatile
- Tested and rated

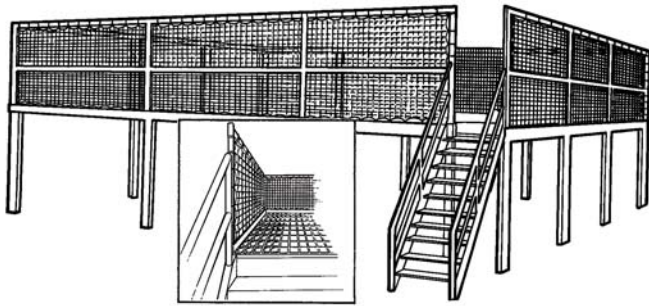

Conveyor Guard

DBI-SALA FlexGuard™ has been developed and tested specifically for conveyor guarding applications (unlike steel mesh, wood, commercial net or fencing material designed for different applications). Our pre-engineered Safety Rated Systems provide everything you need including custom-fitted guarding and all mounting hardware. The flexibility of DBI-SALA conveyor guards can protect virtually any conveyor configuration.

- Nylon construction for added strength and durability
- Flame retardant for additional security
- User-friendly components for quick installation
- Lower-cost compared to metal fabrication
- Broad range of strengths available from 170 to 23,727 nM
- Custom components are available for specific applications

Maybury offers open and closed racking units in a wide variety of sizes and capacities. We have the flexibility to provide top-quality storage for both simple and sophisticated storage systems.

Mezzanine Netting

Prevent items from falling between mezzanine handrails with Networks™ Rack Guard netting. The netting ensures that items located on shelving or stacked on mezzanine floors can't fall and cause injuries or damage inventory or equipment below. Nets can be mounted all the way to the top to prevent order pickers from accidentally pushing items off when working on the inside. Nets effectively close the gaps between handrails on structural mezzanines.

- Nylon construction for added strength and durability
- Flame retardant for additional security
- Lower-cost compared to metal fabrication
- Different strengths available
- Custom components are available for specific applications

Rack Guard

DBI-SALA nylon mesh netting has been developed and tested specifically for rack guarding applications, unlike steel mesh, wood or fencing materials designed for different purposes. Our pre-engineered Safety Rated Systems provide everything you need for a successful installation including custom-fitted guarding and all mounting hardware.

- Nylon construction for lightweight installation
- Flame retardant for additional security
- Lower cost compared to metal fabrication
- Broad range of strengths available from 170 to 23,727 nM
- Universal design to fit multiple rack styles (offset or flush-mount)

Networks™ Overstock Blockades are engineered systems for Material Handling, Industrial and Retail applications. These lightweight systems are designed to prevent material from falling and injuring personnel and damaging the stored product. These complete assemblies are available in various configurations and colors designed to cover a multitude of overstock applications.

- Flame retardant for additional security
- User-friendly components for quick installation
- Lower-cost compared to metal fabrication
