

*Maybury carries a complete line of the highest quality woven wire partitions (in 25 stock sizes), doors, windows and associated hardware. We can also supply several types of matting to improve safety and worker comfort in material handling applications.*

### EZ Wire® Partition System

EZ Wire is a patented "no nuts and bolts" security wire partition system designed to be the most economical and secure system in the industry. The EZ Wire hook-fastener system makes installation up to five times faster than standard bolted systems. Secure storage is achieved through the strength of MilSpec, 10-ga., woven wire panels and 2 1/2" steel posts. Unlike bolted partitions, the system cannot be easily defeated with common hand tools.

- "C" Type frame bars have a smooth finish without unsightly welds
- Perimeter support members attach to panels with self-threading screws; ceiling panels attach without bolts
- Smooth, attractive 90-degree turns in partitioning; panels attach inside for added security
- 14-ga., 2 1/2" tubular posts are the largest in the industry

### EZ Guard® Barriers

EZ Guard is constructed from the same high-quality materials as our EZ Wire partitions. It is designed for machine guarding and as a safety barrier over mezzanines. Use EZ Guard to enclose one machine, a work cell or an entire line. EZ Guard is framed with channel inserts and has no sharp edges. Standard and special configurations are available. Doors can be set up to interlock with your equipment. Consult Maybury for assistance in designing your EZ Guard solution to OSHA compliance.

### Bolted Wire Partitions

Wireway standard bolted wire partitions are designed as modular sections and can be easily installed by one person with common hand tools using the included nuts and bolts. Partitions are interchangeable and can be removed and reused for changing or expanding and installation. All industry recognized door and lock options are available. This line of woven wire partitions is widely recognized in the industry for its quality and wide range of applications.

*Maybury can furnish carts in a variety of styles and capacities, all constructed for rugged use. We can also supply replacement casters and wheels in virtually any style or material.*

## Rack Guards

Steel Rack Guards help keep items from falling and are an essential addition to your pallet rack system. Available in stock widths from 7 to 12 feet and heights from 3 to 5 feet. Panels are attached to pallet rack systems using spacer clips. Heavy-duty 10 gauge 1-1/2" diamond wire mesh welded to a steel angle frame encloses the rack while still providing inventory visibility. Available in Hi Hyde Yellow finish.

## Metro Carts

### Utility Carts

Metro's utility carts are ideal for routine movement of supplies or use as an equipment stand. Available in wire, solid or polymer in various colors, these carts can range from general purpose to all stainless steel for the harshest environments.

### Supply and Transport Carts

Configured from our shelving systems, you can specify size, finish, number of shelves, accessories and so on – or you can order from a selection of preconfigured units. Your choice of polymer shelf systems or solid or wire systems in various finishes to suit your environment.

### Enclosed Carts

These carts can serve many purposes such as containment or protection from theft or contamination, or can simply be used to hide items from plain view. As such, there are various styles to choose from for a multitude of applications.

### Specialty Carts

There are applications that require unique configurations, special accessories or a specific design to meet very specific needs. Below is a sample of the Metro specialty carts offered by Maybury.

- Food service, banquet and dish carts
- Laboratory and research carts
- Healthcare and surgical carts
