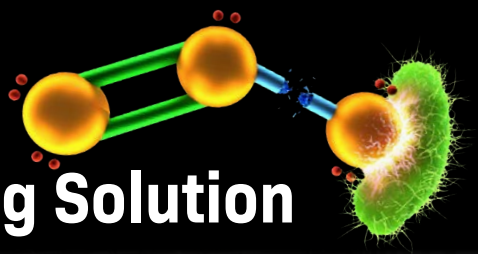
Sanitation

Powered By ZERO3 + Antimicrobial Tanks



Make Unlimited Amounts Of Oxidizing Solution

Green Antimicrobial Tanks

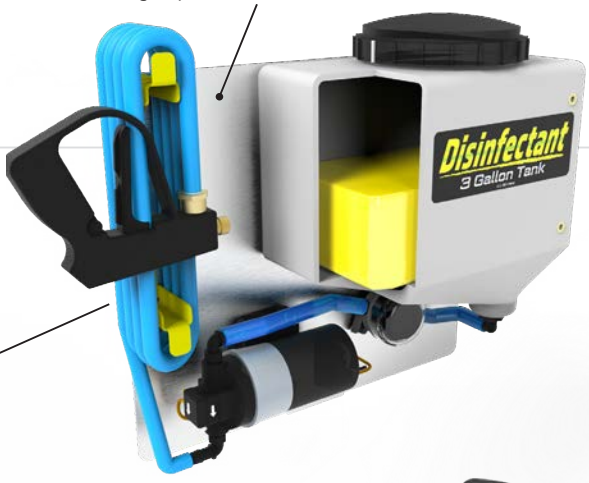
While Supplies Last

Machine Equipped With **Sanitation Package**

Machine Includes These Options:

- 3-Gallon dedicated Disinfectant tank and Handheld Spray Gun
- Antimicrobial Tank
- Onboard $ZERO_3$®
- Non Marking Tires
- Urethane Blades

The 3-gallon remote tank is easily removed for storage if preferred at a later date.



Cleaning With Both $ZERO_3$® And Disinfectant

Ordinary tap water in the solution tank is transformed into aqueous ozone, which like chlorine is a powerful oxidizer. The 3-gallon tank installed on the front is dedicated to approved disinfectants, which can be applied to surfaces with the 100-psi Handheld Spray Gun.

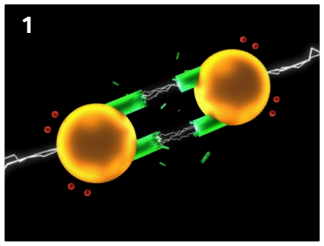
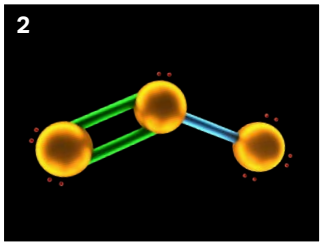
ZerO3 — Replace your general purpose soap with on-demand ZerO3® — # How It **Works**



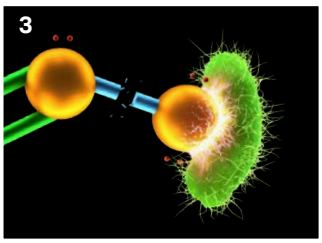
1. Splitting O_2

The ZerO3® AO Generators split Oxygen (O_2) molecules into single radical Oxygen (O_1) atoms via the corona discharge.



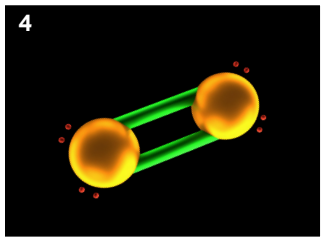
2. O_2 Becomes O_3

The single radical Oxygen (O_1) atoms bond to remaining Oxygen (O_2) molecules, creating Ozone (O_3).



3. O_3 Attacks

The radically bonded Oxygen (O_1) atom will attach to the contaminant and destroy the cell wall, oxidizing the contaminant.



4. O_3 Becomes O_2

Now, only simple Oxygen (O_2) molecules are left, suitable for safe disposal.

How Does Onboard Aqueous Ozone Help Me?

A floor scrubber equipped with on-demand ZerO3® Aqueous Ozone means powerful cleaning from plain tap water. Studies conducted in partnership with local Fitness Centers showed a **greater than 50% increase in surface cleaning performance using ZerO3®**,(Fig. 1) proven by ATP Swab Readings tested before and after on surfaces.

Why Do I Need To Monitor ATP?

You can't improve what you can't measure. Utilizing ATP meters to ensure cleanliness levels is a multi-industry standard.

How Does Onboard Aqueous Ozone Help The Air?

What lives on the floor and in your equipment's recovery tank could be exhausted out into the air you are breathing. Studies conducted with local Veterans Hospitals showed a **greater than 50% increase in exhaust air cleanliness using ZerO3®**,(Fig .2) proven by ATP Swab Readings tested during a multi-week observation and multiple data point testing.

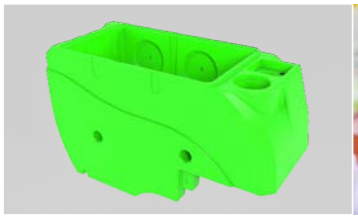
Green Antimicrobial **Tank**

What Are Antimicrobial Tanks?

Antimicrobial infused plastics have agents that kill or inhibit the growth of bacteria and fungi on tank surfaces. This built in technology helps protect the tank from a wide variety of microorganisms 24/7.

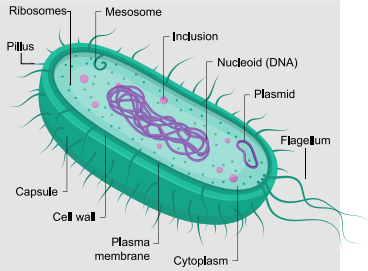
How It Works

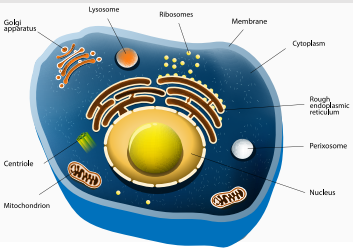
Cells have a thin membrane of fats and proteins that hold them together, when the cell wall is compromised it annihilates the cell. The active compound of the antimicrobial tanks exhibits a complex interplay of different action mechanisms. These do the following to bacteria & Fungi:



Bacteria (prokaryotic cell)

- Plasma membrane function disruption by interfering with phospholipids
- Metal ion chelation
- Interference with trans-membrane transport



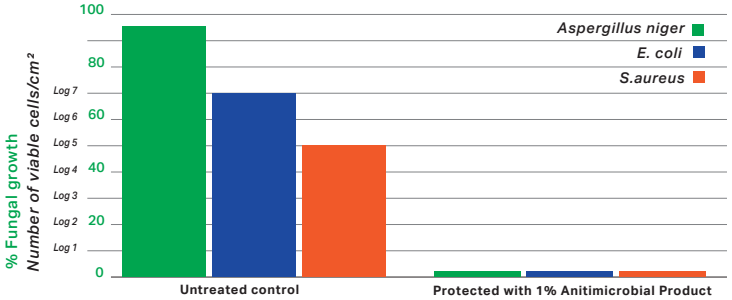


Fungi, yeasts, algae (eukaryotic cell)

- Plasma membrane function disruption
- Interference with iron metabolism
- Inactivation of mitochondrial Fe-S loading proteins

Biological Efficacy

Extensive testing has been done using internationally accepted methods (including ISO, ASTM and JIS). They have been proven to reduce the overall level of both Gram-positive and Gram-negative bacteria on surfaces by up to 99.999%, as well as fungal control rates of up to 100% have been achieved. (See graph below)



Antibacterial efficacy according to ISO 22196 — Antifungal efficacy according to ASTM E2180
